

# ST3232B, ST3232C

# 3 to 5.5 V, low-power, up to 400 kbs RS-232 drivers and receivers

Datasheet - production data

#### **Features**

- 300 μA supply current
- 300 kbps minimum guaranteed data rate
- 6 V/µs minimum guaranteed slew rate
- Meets EIA/TIA-232 specifications down to 3 V
- Available in SO16, SO16L, and TSSOP16 packages

#### Description

The ST3232B and ST3232C devices are 3 V powered EIA/TIA-232 and V.28/V.24 communication interfaces with low power requirements and high data-rate capabilities.

These devices have a proprietary low dropout transmitter output stage providing true RS-232 performance from 3 to 5.5 V supplies. The devices require only four small 0.1 mF standard external capacitors for operation from a 3 V supply.

The ST3232B and ST3232C have two receivers and two drivers.

The devices are guaranteed to run at data rates of 250 kbps while maintaining RS-232 output levels. Typical applications are notebooks, subnotebooks and palmtop computers, battery-powered equipment, hand-held equipment, peripherals, and printers.

# 1 Pin configuration

Figure 1: Pin connections

**Table 2: Pin description** 

Pin n°	Symbol	Name and function
1	C <sub>1</sub> +	Positive terminal for the first charge pump capacitor
2	V+	Doubled voltage terminal
3	C <sub>1</sub> -	Negative terminal for the first charge pump capacitor
4	C <sub>2</sub> +	Positive terminal for the second charge pump capacitor
5	C <sub>2</sub> -	Negative terminal for the second charge pump capacitor
6	V-	Inverted voltage terminal
7	T2 <sub>OUT</sub>	Second transmitter output voltage
8	R2 <sub>IN</sub>	Second receiver input voltage
9	R2 <sub>OUT</sub>	Second receiver output voltage
10	T2 <sub>IN</sub>	Second transmitter input voltage
11	T1 <sub>IN</sub>	First transmitter input voltage
12	R1 <sub>OUT</sub>	First receiver output voltage
13	R1 <sub>IN</sub>	First receiver input voltage
14	T1 <sub>OUT</sub>	First transmitter output voltage
15	GND	Ground
16	V <sub>cc</sub>	Supply voltage

#### 2 Absolute maximum ratings

Table 3: Absolute maximum ratings

	g-						
Symbol	Parameter	Value	Unit				
V <sub>CC</sub>	Supply voltage	-0.3 to 6					
V+	Doubled voltage terminal	(V <sub>CC</sub> - 0.3) to 7					
V-	Inverted voltage terminal	0.3 to -7					
V+ +  V-		13	.,				
T <sub>IN</sub>	Transmitter input voltage range	-0.3 to 6	V				
R <sub>IN</sub>	Receiver input voltage range	±25					
T <sub>OUT</sub>	Transmitter output voltage range	±13.2					
Rout	Receiver output voltage range	-0.3 to (V <sub>CC</sub> + 0.3)					
t <sub>SHORT</sub>	Transmitter output short to gnd time	Continuous					
T <sub>stg</sub>	Storage temperature	-65 to 150	°C				

Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.

Externally applied V+ and V- can have a maximum magnitude of +7 V, but their absolute addition can not exceed 13 V.

Running on internal charge pump, intrinsic self limitation allows exceeding those values without any damage.

Startup voltage sequence (V<sub>CC</sub>, then V+, then V-) is critical, therefore it is not recommended to use this device using externally applied voltage to V+ and V-.
